Condition C/A ENGINE MISFIRE AND WHITE SMOKE

Cause

Correction

Customer complaint of engine misfire and white smoke. I pulled the truck into the shop and ran diagnostic test to find the problem, I found that injectors 1&2 had piston to injector contact damage. we also found that their was progressive damage after the piston to injector contact damage occurred, engine needs overhaul, customer approved overhaul. I then drained coolant and a/c from the truck. I then drained the oil and removed all air intake piping. I then removed the hood and radiator from the truck. Once the radiator was removed I then removed all accessory drive units from the front of the engine. I then removed the turbo, thermostat housing and exhaust manifold. I then removed the intake manifold crankcase filter assembly and IFSM fuel module. I then removed all injectors, I then removed the injector rocker assembly and valve rocker assembly. I then removed front gear cover and removed valve camshaft gear and injector camshaft gear. I then removed all 26 cylinder head bolts and removed the cylinder head. I then removed the oil pan and removed the oil suction tube, stiffener plate and oil pump. I then removed all j-jet nozzles and removed the piston from the block and removed all liners. I then inspected and cleaned the block deck. I then removed all main bearing caps and installed main caps with new bearings and torqued all 7 main caps to specification. I then installed 6 new liners into the block and checked for liner protrusion. I then installed new rod and pistons for cylinders 1&2 and installed new pistons onto rods 3-6. I then installed new piston rings onto the pistons and installed all pistons into the liners. I then installed rod caps with new bearings and torqued all six rods to specification. I then installed the oil pan with new gasket and torqued to specification. I then installed the new cylinder head onto the block with new gasket and torqued cylinder head bolts to specification. I then installed the valve camshaft and injector camshaft into the head and inserted timing wedge and pin. I then installed both gears onto the camshaft and set engine base timing and torqued gears to specification. I then installed valve and injector rocker assembly and torqued to specification. I then barred the engine over and set valves and injectors 1-6. I then installed Jake brake harness and installed valve cover with new gasket and torqued to specification. I then installed front gear cover with new gasket and torqued to specification. I then installed IFSM module and torqued to specification. I then installed intake manifold and crankcase assembly and torqued to specification. I then installed thermostat housing, exhaust manifold & turbo with new gaskets and torqued to specification. I then installed all accessory drive components. I then installed radiator assembly and air intake piping. I then installed harnesses and secured with zip ties. I then filled the truck with 12 gallons of oil and 12 gallons of coolant. I then primed the fuel system
