MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Meeker County, Minnesota
Survey Area Data: Version 10, Sep 19, 2016

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 18, 2011—Sep 7, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Crop Productivity Index

| Crop Productivity Index— Summary by Map Unit — Meeker County, Minnesota (MN093) | | | | |
|---|---|--------|--------------|----------------|
| Map unit symbol | Map unit name | Rating | Acres in AOI | Percent of AOI |
| 8B | Sparta loamy sand, 1 to 6 percent slopes | 39 | 2.3 | 3.4% |
| 129 | Cylinder loam, 0 to 2 percent slopes | 65 | 0.0 | 0.0% |
| 143B | Chelsea loamy fine sand, 1 to 6 percent slopes | 46 | 10.9 | 16.2% |
| 178 | Granby fine sandy loam, 0 to 1 percent slopes | 50 | 6.0 | 8.9% |
| 181 | Litchfield loamy fine sand, 0 to 2 percent slopes | 67 | 23.2 | 34.3% |
| 183 | Dassel mucky fine sandy loam, depressional, 0 to 1 percent slopes | 72 | 2.1 | 3.2% |
| 281 | Darfur loam, 0 to 2 percent slopes | 82 | 14.4 | 21.3% |
| 327B | Dickman sandy loam, 2 to 6 percent slopes | 49 | 4.9 | 7.2% |
| 1406 | Medo, Dassel, and Biscay soils, ponded, 0 to 1 percent slopes | 5 | 3.7 | 5.5% |
| Totals for Area of Interest | | | 67.6 | 100.0% |

Description

Crop productivity index ratings provide a relative ranking of soils based on their potential for intensive crop production. An index can be used to rate the potential yield of one soil against that of another over a period of time. Ratings range from 0 to 100. The higher numbers indicate higher production potential. The rating is not crop specific. Minnesota inquiries must use the “Map Unit Cropland Productivity Report (MN)” soils report from the Soil Reports tab under “Vegetative Productivity”.

When the soils are rated, the following assumptions are made: a) adequate management, b) natural weather conditions (no irrigation), c) artificial drainage where required, d) no frequent flooding on the lower lying soils, and e) no land leveling or terracing. Even though predicted average yields will change with time, the productivity indices are expected to remain relatively constant in relation to one another over time.

Rating Options

Aggregation Method: Weighted Average

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

Interpret Nulls as Zero: Yes
